

Heated Car Seat Cushion

To Use:

1. Note there are two elastic straps on the back of the cushion and one elastic strap with hooks below them. Set the cushion on your car seat with the 2 upper elastic straps around the back of the seat.
2. Direct the strap with hooks either behind or under the car seat and connect the hooks.
3. Insert the plug on the end of the power cord into the vehicle cigarette lighter socket or power socket.
4. The power switch is the middle of the cord. Set to the high or low position. Cushion will begin to heat within seconds.
5. After use, move the switch to the OFF position.
Caution: leaving it on may drain the car battery.

To clean, wipe with a damp cloth, then absorb any moisture with a dry towel.

Input power: 12V DC

Power Consumption: 45 Watts
